

MyHOME_Up Automation Lighting, heating and audio

Smart devices in the home can operate in isolation to manage the efficiency of individual services such as heating, hot water, lighting and assisted living. Discover how combining these as a system, incorporating home energy management or a hub to receive data from the outside world will increase the efficiency of an automated system and discover the multifaceted benefits. Learn how the role of automation is key and can ensure consumers maintain comfort in their home while reducing energy costs and peak demand.
