

# CPD seminar

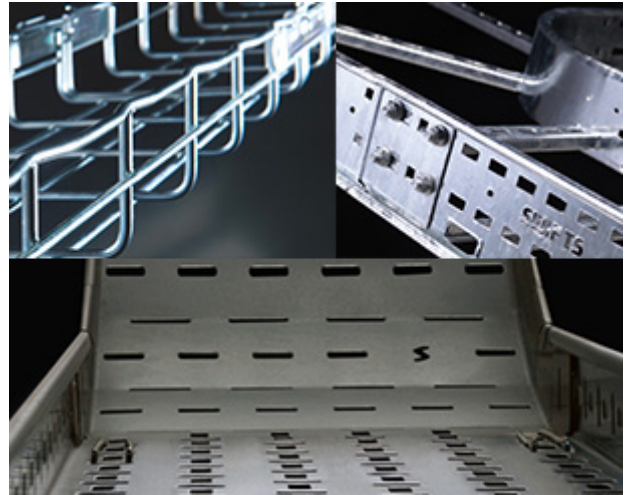

## Technical guide to cable management systems

This new ‘technically’ based CPD presentation, covering cable management systems, is aimed at more experienced engineers with a greater depth of knowledge over the subject matter.

The presentation includes: introduction; installation of the system; installation of the cable; environment; regulations and standards; summary; further learning and Q&A.

At the end of the seminar, participants will have examined the following topics:

- Ladders and trays should only be employed for their intended use
- Safe use of these products is best ensured by installing parts that have been designed and tested together as a system
- Due consideration should be made to deflection limits and to load tests in order to make true comparison
- Location of support positions and the type of fittings selected in regards to bending radii of the cables is key
- Selecting the right finish for the environment should be of paramount consideration
- Ladders and trays should be considered as integral parts of the building fabric

### SEMINAR CONTENT

- Energy Efficiency background
- Transformer – Tier 2
- Busbar systems
- Switchboards
- Uninterruptible Power Supply
- Lighting management
- Metering & energy software
- Project design
- Summary
- Regulations and standards
- Further learning and case studies
- Q&A

### TARGET AUDIENCE

This seminar is ideal for:

- Architects
- Product specifiers
- Facilities Managers
- Electrical consulting engineers
- Electrical contractors

### DURATION

1 hour (to include a Q&A session)

### LOCATION

Virtual via Microsoft Teams or face-to-face at your offices

### BOOKING DETAILS

Complete the booking form online at [www.legrand.co.uk/CPD](http://www.legrand.co.uk/CPD)
